DETAILED ACTION

Reasons for Allowance

Claim 5 is allowed. The following is a statement of reasons for the indication of allowable subject matter. Prior art teaches the optical switching network having the first and second switching parts connected by optical fibers and optical path switching elements *except for* the optical path length from the input port to the output port being substantially the same. This is attributed to the staggered optical switching elements positioning by the Applicant. In contrast, prior art teaches that the optical path length measured from, for example, the first input port to the first or fourth output port would be substantially different. It is the examiner's opinion that the prior art of record, taken alone or in combination, fails to disclose or render obvious in combination with the rest of the limitations of the base claim.

Claims 8 and 11 are allowed. Suemura et al. teach the optical switching network having the first and second switching parts connected by optical fibers and optical path switching elements except for the optical path switching parts comprising planar waveguide having input ports, coupling ports, reflection mirrors inserted respectively in trenches and actuators driving the respective reflection mirrors. Since Suemura teaches the input and coupling ports to be physically separated from the optical switching elements, and combination or modification thereof would destroy the Suemura reference. It is thus the examiner's opinion that the prior art of record, taken alone or in combination, fails to disclose or render obvious in combination with the rest of the limitations of the base claim.

Claims 9 and 10 are allowed by virtue of being dependent upon allowed claims.
